

Digital Literacy Project Report

Title Page

Name: Saksham Jain

Registration Number: 25BCE10787

Branch: B.Tech CSE

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 26th March 2026

Introduction :

This project is based on the Digital Literacy course and aims to develop essential digital skills required for students in today's world. As a Student Digital Ambassador, the objective of this project is to understand and apply various digital tools, platforms, and online communication practices.

The project consists of five tasks, each focusing on different aspects such as presentation tools, digital portfolio creation, coding platforms, email etiquette, and cybercrime awareness. Through these tasks, I explored practical applications of digital technologies and learned how to use them effectively for academic and professional purposes.

This project helped me improve my understanding of online safety, professional communication, and the importance of maintaining a strong digital presence.

Task 1 - Presentation:

I created a Digital Literacy Awareness infographic using Canva. The purpose of this infographic is to help students understand the importance of digital literacy in today's world.

In my design, I explained what digital literacy means and how it helps in using technology in a safe and smart way. I also included safe internet practices such as using strong passwords and avoiding unknown links. Additionally, I mentioned useful digital tools like Google Docs, Canva, GitHub, and LinkedIn that are helpful for students.

While creating this infographic, I found it interesting to design the layout and organize the information in a simple and clear way. The most challenging part was selecting the right content and making sure it looks clean and easy to understand.

Overall, this task helped me improve my understanding of digital tools and online safety.

Task 2 - Digital Portfolio:-

In this task, I created my digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. GitHub is used to store and manage my coding projects, which helps me track my progress and showcase my work to others. LinkedIn is a professional networking platform where I can connect with professionals, explore opportunities, and build my career profile. Kaggle is a platform for learning data science and participating in competitions, which helps improve my analytical and problem-solving skills.

In the next four years, I plan to use GitHub to upload my projects regularly and improve my coding skills. I will use LinkedIn to build professional connections and stay updated with industry trends. On Kaggle, I will participate in competitions and learn more about data science and machine learning. These platforms will help me grow my skills and prepare for future career opportunities.

Task 3 - Platforms:

In this task, I explored coding and collaboration

platforms to improve my digital skills. I created an account on HackerRank and completed beginner-level problems. This helped me understand the basics of coding and problem-solving.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including both multiple-choice and short-answer types question. I also collected responses and viewed them in a Google Sheet, which helped me understand how data is organized and analysed.

These platforms are very useful for academic growth. HackerRank helps in improving coding skills, while Google Forms is useful for creating surveys and collecting data efficiently. I believe and very confident that these tools will help me in my studies and future projects.

Task 4 - Email - Etiquette:

In this task, I learned about professional email writing and social media etiquette. I wrote two emails, one requesting an assignment extension and another expressing interest in a summer internship. While writing these emails, I understood the importance of proper subject

lines, polite language, and clear communication.

I also created a social media checklist of do's and don'ts for college students. I realised that poor digital communication can create misunderstandings or negative impressions. For example, sending an email without a proper subject or using informal language may appear unprofessional.

This task helped me understand how to communicate effectively in a professional environment.

Task 5 - CyberCrime:

While working on this task, I learned about different types of cybercrimes, especially phishing. I was surprised to know how easily attackers can trick people by creating fake emails and websites that look real.

I realised that many students and users become victims due to lack of awareness and urgency created by such messages. One important habit I will personally change is being more careful while clicking on links and verifying the authenticity of emails before taking any action.

This task helped me understand the importance of digital safety and how following simple precautions can prevent serious problems like financial loss and data theft.

Conclusion :

Overall, this project helped me gain practical knowledge about digital literacy. I learned how to use various digital tools, create a professional online presence, communicate effectively, and stay safe online.

Each task provided valuable insights into different aspects of digital life. This project has improved my confidence in using technology for academic and professional purposes. I will continue to apply these skills in my future learning and career.
